## **ASPEN MIDSTREAM ANNOUNCES FINAL INVESTMENT DECISION ON NEW KATY HUB FACILITY, ENHANCING CONNECTIVITY TO GROWING GULF COAST DEMAND MARKETS**

**DALLAS, TX. - May 13, 2026** – [Aspen Midstream, LLC](#) (Aspen) today announced it has reached a final investment decision (FID) on its Aspen Katy Hub header facility. This strategic midstream infrastructure project will provide bi-directional natural gas connectivity in the Katy, Texas region by linking growing domestic supply to rapidly expanding LNG, power, and industrial markets along the Gulf Coast.

The project, which is backed by long-term, take or pay contracts with investment grade shippers, will include the installation of new compression and feature both low- and high-pressure header systems. Upon completion in the first quarter of 2027, the facility will provide approximately 3 billion cubic feet per day (Bcf/d) of total receipt and delivery capacity with eight major natural gas pipelines.

“The Aspen Katy Hub is strategically positioned at a critical intersection between some of the nation’s most prolific natural gas supply basins and rapidly growing Gulf Coast demand centers,” said Matt Ray, Co-Chief Executive Officer of Aspen Midstream. “This investment reflects our disciplined approach to deploying capital behind long-term, contracted infrastructure that enhances market connectivity and delivers reliable energy where it’s needed most.”
